

Diesel Maintenance Center

A Central Service Point for Diesel Engines

Fuel Filtration

Separ Filter fuel / water separator removes 99.9% of water and particulate to ensure clean fuel

Less Priming Time

In-line hand primer pumps at high flow to purge air out of system

Fast Oil Changes

Reversible pump drains and fills oil quickly without the risk of spills

In one convenient, mounted station you can clean the diesel fuel, prime the engine and change the oil. Protect your equipment from one, easy point of service. Each feature saves time on maintenance, eliminates spill risks and improves reliability of operation.

The *fuel / water separator* prevents 99.9% of water and particulate from entering the engine system and causing damage to the components. This cleans fuel at a flow capacity of 79 GPH.

The *hand priming pump* purges the air out and moves fuel at the high rate of .85 oz per stroke.

The *oil change pump* drains the used oil to a waste container at 2.5 GPM. Reverse the pump flow with one switch to fill the engine with new oil.

- ▶ **Multiple maintenance for diesel engines**
Single station filters diesel fuel, primes the engine and changes the oil
- ▶ **Ideal for generators**
Permanently install on emergency, standby or primer power
- ▶ **Compact design**
All components fit on a common base for easy installation and small footprint
